

# Front-end Developer Job Specification

## Overview

We are looking for an experienced front-end developer, that also has an appreciation of good UI/UX.

Working for a cutting-edge, emerging Financial Technology business, you will be helping to create products crossing the realms of blockchain technology and traditional finance.

In close collaboration with the product designer and CTO, you will be bringing designs to life through your craft and utilising your experience to provide guidance and feedback to others. You will be working in a small team, delighting our customers as they experience our platform.

We are a tight-knit team who support each other and leave our ego at the office door. The support we need now is from you in order to take our product to the next level.

We can't wait to have you join us for the ride!

## What we'd love you to have

- A portfolio that speaks for itself
- A background in front-end development, specifically using React
- Experience of:
  - Circle CI
  - SASS
  - Managing your own workload
  - Agile methodologies
  - Automated Testing (Selenium and Jasmine)
  - Working with RESTful APIs
  - Working with AWS

We ask a lot, but - wanting to be the best - we have to! We'd guess that you'll have about 3 - 5 years experience, but we love rising stars, so that's not in any way a necessity.

## What are we offering

In return for your desperately in-demand skills, we offer:

- A good salary
- A 10% profit share, split equally among all staff by headcount - not salary
- Equity options in our business
- Work From Home Wednesdays
- Private healthcare & dental
- Pick your own gym membership
- Free coffee from the local coffee shop (we think it's the best coffee in London)
- Support in your professional development
- Recognition that your life is more than just your work
- A hilarious and driven team to work with (if we do say so ourselves)
